Jose Carlo Suarez Brucsoni

Backend Developer | C# (.NET) & Python | SQL & Data Systems |
Cybersecurity Focus

Santa Cruz de la Sierra, Santa Cruz, Bolivia

Extracto

Backend Developer with 2+ years of experience building and optimizing data-driven systems using C# (.NET) and SQL Server. I have a proven track record of improving system performance by up to 90% and developing scalable solutions that support real-world operations, including systems used by 50+ users processing over 10,000 daily records. My core expertise lies in backend development, database optimization, and business process automation. I specialize in designing efficient systems and transforming complex data into actionable insights that support financial and operational decision-making. In addition to my experience with C#, I am expanding my expertise in Python, focusing on data analysis and cybersecurity. I am particularly interested in building secure, efficient, and scalable backend systems that solve real business problems. I am currently open to remote opportunities where I can contribute to high-impact projects, continue growing as a backend developer, and work with modern technologies in collaborative environments. Technologies: C#, .NET, SQL Server, Python, REST APIs, Git

Experiencia

Universidad Tecnológica Privada De Santa Cruz

5 años 11 meses

Analista de sistema

julio de 2023 - Present (3 años)

Dipartimento Santa Cruz, Bolivia

Backend & Software Development (C# / .NET)

Designed and developed "DANTE," a high-impact enterprise system that digitalized financial workflows across multiple departments.

Reduced manual processing time by 90%, significantly improving operational efficiency for 50+ active users.

Built and maintained a system processing 10,000+ daily records, ensuring high reliability and performance.

Database Engineering & SQL Optimization

Managed and maintained a core academic database (20+ tables, 10,000+ records) using SQL Server.

Optimized complex transactional queries, reducing execution time from 10 minutes to 10 seconds (90% performance improvement).

Improved data integrity and system responsiveness for high-frequency operations.

Data Analysis & Reporting

Designed and automated 10+ analytical reports used by academic and financial leadership.

Delivered actionable insights on key metrics such as student retention, payment behavior, and enrollment trends.

Enabled data-driven decision-making across multiple departments.

Auxiliar de Laboratorio de Redes y Sistemas

agosto de 2020 - junio de 2023 (2 años 11 meses)

Dipartimento Santa Cruz, Bolivia

Process Automation & Web Development

Developed a web-based system for managing technical support requests and inventory.

Reduced manual administrative workload by 80% through process automation.

Infrastructure & Systems Management

Managed maintenance of 72 workstations, ensuring 90% system availability.

Installed and configured network infrastructure across 21 computer labs, improving connectivity and operational stability.

Cybersecurity & Technical Training

Designed and delivered 10+ technical workshops on cybersecurity fundamentals, ethical hacking, and Git.

Trained 50+ students, strengthening their technical and security awareness.

Autónomo

Freelance

enero de 2019 - julio de 2020 (1 año 7 meses)

Santa Cruz, Bolivia

Proyectos Destacados (Android):

Proyecto 1: "Encuentrame" (App de Clasificados)

Desarrollé una aplicación Android nativa en Java para la búsqueda/oferta de empleos y la compra/venta de propiedades y vehículos.

Implementé Firebase (Auth y Firestore) para gestionar los perfiles de usuario y las publicaciones de clasificados en tiempo real.

La aplicación alcanzó 120 descargas durante su fase de distribución local.

Nota: El proyecto se encuentra pausado y no está en la Play Store. (Código disponible en GitHub).

Proyecto 2: "Anglarill-Fitness" (Gestor Nutricional B2C)

Creé una aplicación Android en Java para el nutricionista Jose Alberto Anglarill, diseñada para la gestión y seguimiento de sus pacientes.

La app permitía a los pacientes registrar su peso, comidas e ingesta de agua, mientras que el nutricionista publicaba planes y recetas diarias.

Utilicé Firebase (Realtime Database) para la sincronización instantánea de datos entre el nutricionista y sus 20 pacientes activos.
